

The original Bitcoin hardware wallet.

Discover the most trusted and secure way to store your bitcoins and other cryptocurrencies. Isolate your private keys into the safety of TREZOR and enjoy the perfect peace of mind.

Explore support for BTC, ETH, ETC, LTC, ZEC and DASH, or additional functions like Password Manager, FIDO/U2F at trezor.io

Security Made Easy

Leading security by design.

Advanced cryptography, reliable hardware, simple interface.

Trust your own eyes

Check important transaction details before you confirm.

Trust your own hands

Everything important needs your direct physical approval.

Minimalistic

We removed everything that could be easily hacked

Small and Sturdy

Fits into your palm. Tamper-proof, water-resistant and extremely durable.

Powerful Cryptography

TREZOR uses and creates the most advanced standards in cryptography and Bitcoin.

Recovery Seed

Recovery Seed is the 24-word long recovery phrase, with which you can restore your wallet, in case of theft or loss. It is absolutely crucial for you to write down the seed somewhere safe! The recovery seed will be generated for you during the setup of your TREZOR.

Your first Recovery Seed 

- | | |
|----------|----------|
| 1 | 13 |
| 2 | 14 |
| 3 | 15 |
| 4 | 16 |
| 5 | 17 |
| 6 | 18 |
| 7 | 19 |
| 8 | 20 |
| 9 | 21 |
| 10 | 22 |
| 11 | 23 |
| 12 | 24 |

PIN

PIN is the code you choose to protect your TREZOR. Use at least 4 different numbers.

The virtual layout of the PIN pad will be displayed on the TREZOR screen. It shuffles every time a new prompt shows up.

Passphrase (Advanced)

A passphrase can be any combination of words, phrases, or a set of letters, which serves as an additional protection of your TREZOR. Each different combination creates a different wallet, therefore make sure to remember your chosen passphrase.
